Karthik Sudhan S G

Full-Stack Developer · Data Engineer

Chennai, India · +91-8124500371 · sudhan260703@gmail.com · github.com/karthik2607 · linkedin.com/in/karthik-sudhan-s-g · karthik2607.github.io

SUMMARY

Full-stack developer and data engineer with 1.5 years of production experience. I build backends and web apps in TypeScript and Go: I designed and shipped a multi-tenant ITSM/ticketing portal (Fastify, Prisma, PostgreSQL row-level security, CI/CD) for my team and its customers. Day to day I build and support ETL pipelines and data warehouses (SQL, Python, Snowflake, Informatica, Databricks) for a US retail client. Strong in API integration, data modeling, SQL optimisation and root-cause analysis.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript (Node.js), Go, Python, SQL, Java, Spark SQL
Backend & Web	Fastify, REST API design, JWT auth, Zod validation, Prisma ORM, HTML/CSS, Vitest
Data Engineering	Snowflake (views, tasks, tuning, Time Travel), Informatica Cloud, Databricks, dimensional modeling, star schema, Medallion architecture
Databases	PostgreSQL (row-level security), Oracle (admin & tuning), SQL Server, MongoDB
Integration	REST APIs, OAuth, JDBC, Swagger/OpenAPI, IMAP/SMTP email automation
DevOps & Tools	Git/GitHub, GitHub Actions, Linux, systemd, AWS, MicroStrategy, Streamlit

PROJECTS

ITSM & Status Report Portal — Ticketing Tool — TypeScript · Fastify · Prisma · PostgreSQL · GitHub Actions

- Built a multi-tenant IT service management portal (incidents, service requests, change management, projects, weekly status reports) for Doyensys and its customers; 21-table Prisma schema with migrations.
- Enforced tenant isolation with PostgreSQL row-level security set per request through a single *withTenantContext()* choke point, plus JWT auth and role-based access (customer vs support roles).
- Automated email-to-ticket ingestion over IMAP, email notifications, Excel export of project plans, and CI/CD via GitHub Actions deploying to a Linux server.

Zappy Messaging — Real-time chat application

- Built a messaging application with user accounts and real-time one-to-one conversations.

SalesSync Data Warehouse — SQL Server · Medallion · Star schema

- Designed a Bronze/Silver/Gold warehouse integrating ERP and CRM data: automated CSV ingestion with stored procedures, cleansed Silver layer, and star-schema fact and dimension tables in Gold for analytics.

EXPERIENCE

Doyensys Inc, Chennai — Jun 2025 – Present

Associate Consultant (Oct 2026 – Present) · Management Associate (Jun 2025 – Oct 2026) — Data engineering for Petmate, a US retail client

- Built and maintain 5+ production Informatica ETL pipelines moving data between REST APIs, Oracle and Snowflake, including an automated record-count notification pipeline for load monitoring.
- Restored 10 days of missing Amazon order data (~2,000 orders/day) by tracing a task-flow failure to a broken notification step, fixing it and backfilling the Oracle staging table.
- Building a Walmart API pipeline that cleanses and transforms data in Snowflake and loads it into the Oracle and Snowflake warehouses.
- Integrated the Pattern PXM REST API (OAuth) into Snowflake for 2,000+ product collections; first test load (6 collections, 335 attribute rows) completed with zero rejects.
- Integrated the Ignition SCADA/IIoT platform with Snowflake over JDBC, capturing machine data at 5-second intervals.
- Improved MicroStrategy report performance by optimising SQL, data model and report design; fixed forecast discrepancies by correcting Snowflake task logic.
- Fixed Shopify data inconsistencies during marketing campaigns; used Databricks notebooks for ingestion and cleansing; handled Oracle DBA work and Oracle EBS data flows.

EDUCATION & CERTIFICATIONS

Vellore Institute of Technology, Chennai — B.Tech CSE (Cyber Physical Systems), CGPA 8.8 — 2021 – 2025

OCI 2025 Certified Foundations Associate · AWS Academy Cloud Foundations · GitHub Foundations
